

ArcBill

A universal bill management software to streamline accounts payable and receivables

Automated end-to-end Billing Process

A 3- step process to optimize the payments—Create bills. Approve. Make payment. Upload bills using the drag and drop / OCR scanning option and submit them for review instantly. Track the status of approvals thereafter and initiate payments to suppliers or vendors on time through any of these payment modes—ACH, Paypal, card payments, and checks.

Paperless Invoicing

Keep your cash flow ticking through an organized and well-controlled invoice process. Create or import invoices using a CSV file and send them to customers. Alert customers when the payment date nears and set up automatic triggers for customers requiring multiple follow-ups.

Create Quotes

No guesswork for estimates. Generate professional quotes. Start engaging with potential customers by creating accurate quotes using in-built templates. Convert those quotes into invoices once the customer confirms and send them back in no time.

Product & Category

Use ArcBill to manage products under different categories and monetize them by configuring custom offers and applying other discount rules. This paves the way for flawless invoicing with greater accuracy.
